Many superior choices to improve air distribution performance.

Bringing the air from an HVAC system and delivering it to the right spots in a room is the basic function of Lima/J&J's grilles, registers and diffusers. Choosing the right product for your application can have a dramatic impact on air distribution performance. All of our products are precisely designed for specific applications and optimum results. The product matrix within this brochure is designed to help simplify your selection in choosing the right product.

A big factor in overall efficiency.

There are three major cost components of any HVAC application: labor, HVAC systems, and air distribution systems. Picking the right air distribution system can greatly influence the major cost factor in installing an HVAC

system—labor time—and can make a positive impact on your customer's bottom line by improving air flow and comfort.

Lima/J&J products are backed by a team of specialists who provide your business with a proven method of increasing air delivery efficiency. And that means a positive impact on profitability.

Plus, Lima/J&J can help you choose the right air distribution products and accessories to complete the job. As the largest U.S. manufacturer of air distribution products, we can provide comprehensive solutions to help you manage and design effective solutions for your customers.
