

# The Perfect Solution for Relining Masonry Chimneys

## Model SLK Stainless Steel Chimney Liner Kits

The stainless steel chimney liner kits are the latest new product in American Metal Products' ever-expanding line of venting and chimney products.

The complete line of flexible liner kits are available in 4" to 8" diameters and 25' and 35' lengths. In addition to the kits, we have 25' and 35' individual lengths and 10' insulated

sleeves for improved venting in colder climates, especially for exterior masonry chimney installations.

The 10' insulated sleeves also include everything you need to install them around the

liner, including 10' of insulation wrap, 10' of wire mesh, hose clamps, and 14' of foil tape.

This kit is the perfect solution for relining chimneys used to vent oil-burning heaters. It can also be used on wood, coal and noncondensing, gas-fired appliances. The tee swivels for easy alignment during

installation and features a 14"-long tee branch that is easily fastened with a convenient tab and slot design.

The kits have a lifetime warranty.
