## **We're improving the S90HFF Fixed Bar Filter Grilles!**

We're redesigning the Model S90HFF Fixed Bar Filter Grilles to make installation easier

We listened to your requests concerning the design. As a result we're making several improvements, some large and some small, as listed below.

### Improvements and Benefits:

1. The back frame was listed size. It is now at listed size less 1/16" to make fitting into standard duct work simple.
2. The overall margin was listed size plus 3-3/4 inches. It is now listed size plus 2-5/8 inches. This makes covering rough openings easier.
3. Previously the face was non-removable, fixed to the frame with hinges. Now it can be easily removed, without tools allowing the installer to install the lightweight frame first and then slip on the face afterward.
4. The face was secured with two slotted, pan-head screws. It is now opened using simple thumb operated latches. No tools are required.
5. We added filter retainer tabs all around the frame which can be easily adjusted to allow a snug fit with the filter, if necessary.

Some changes also affect the S90HFF T-bar models, namely, the faces will be removable and the latches will be the thumb latches.

These improvements are being made as a running change that will be effective November 7, 2011. Existing inventory will be shipped before we switch to the new style.

The lead-time for non-stock S90HFF filter grilles will be 30-days until February 2012 when additional manufacturing improvements can be implemented.

Thanks for the feedback and good selling!
